[heading title="Epidemiology"][/heading]

We focus on capacity building, technical assistance and implementation of evidence-based approaches to clients who seek to increase health service delivery in underserved communities. We conduct both short-term and long-term epidemiologic projects in chronic and infectious diseases on vulnerable populations at risk of diseases. Our team is available to develop needs assessments and develop questionnaires to identify areas in need of improved health services. We also offer educational training, workshops and seminars to clinicians in basic courses in epidemiology and biostatistics, SPSS and Epi-Info.
